STUDY

## About the DIMENSION Study

The DIMENSION Study is evaluating the safety and efficacy of an investigational oral drug in adults with early Huntington's disease (HD). This drug is being tested to see if it can specifically target cognitive symptoms associated with HD.

The study lasts up to 20 weeks and includes 9 visits to the study office. You may invite a study partner to attend study visits and help you complete study activities.

There will be an open-label extension (OLE) study, which is planned to begin later in 2022. Participants who are interested can speak to the study team.

## Study eligibility is determined at a screening visit. During the visit, you will:

1. Meet with the study doctor and staff
2. Review additional eligibility criteria
3. Have an initial evaluation and assessments
4. Complete the study questionnaires

## How Do I Qualify?

To be eligible for the study you must:

- Be 25 to 65 years of age
- Have been diagnosed with early Huntington's disease
- Be ambulatory (able to walk)

*The study doctor will discuss additional eligibility requirements.*

STUDY

## If you qualify and decide to participate:

- A study doctor will closely monitor you, your symptoms, and your overall health
- All study-related procedures and investigational drug will be provided at no cost
- Transportation assistance may be available, if needed

Your safety is the highest priority while participating. If you have questions or concerns at any point throughout the study, a study staff member is available. The study staff can also tell you about their specific COVID-19 safety protocols.

Your participation in the DIMENSION Study is completely voluntary. If you decide to participate in this research study, you are free to withdraw at any time, for any reason, without any penalty or effect on your medical care.

## About Huntington's Disease

Huntington's disease is a progressive brain condition that is passed down in families.<sup>1,2</sup> It causes uncontrolled movement, decline of mental (cognitive) abilities, and emotional issues.<sup>2</sup>

- Huntington's is caused by a genetic mutation<sup>1,2</sup>
- Symptoms typically appear between the ages of 30 and 50, but can occur earlier or later<sup>1,3</sup>
- If a parent has Huntington's, there is a 50/50 chance that their child will inherit it<sup>1</sup>

Cognitive symptoms may include:<sup>4-5</sup>

- Difficulty paying attention
- Trouble thinking through steps of an activity
- Difficulty thinking through complex problems
- Difficulty planning, remembering, and staying on task
- Impaired judgment
- Difficulty with multi-tasking

As Huntington's progresses, it will become more and more difficult to continue performing daily activities. Although there is no cure for Huntington's, there are ways to help manage some of the physical and emotional symptoms.<sup>1</sup> Currently no treatments are approved to specifically manage cognitive symptoms. Talk to your doctor if you have any questions about Huntington's or its symptoms.
